DATA STACK

Languages
SQL · Python

Processing
PySpark · Spark Structured Streaming · Apache Kafka · Databricks

Orchestration and quality
Apache Airflow · pytest · GitHub Actions (CI)

Data and modeling
MySQL · PostgreSQL · Dimensional modeling · ETL

Platform
Docker / Docker Compose · Git / GitHub · FastAPI / REST APIs

EDUCATION

Industrial Engineer
Professional Degree
Universidad Nacional de Trujillo
CIP 324926

Bachelor's Degree in Civil Engineering
Universidad Privada del Norte

LANGUAGES

Spanish · native

English · basic

KEVIN STEVEN REYES MOROCHO

INDUSTRIAL AND CIVIL ENGINEER · DATA ENGINEERING

PROFILE

Industrial and Civil Engineer with more than 5 years leading management systems (ISO 9001, 14001, and 45001), key performance indicators (KPIs), and maintenance and operations processes in the mining and industrial sectors. On top of that foundation I add data engineering: SQL, Python, PySpark, Kafka, Airflow, and dimensional modeling, applied in my own database, Data Warehouse, ETL and streaming pipeline, orchestration with automated testing, and API projects. **First place in Datapath's AI Data Engineer program** (2026). I am looking to bring this combination of processes, management systems, and data to a Data Engineering team.

DATA ENGINEERING PROJECTS

Sales ETL pipeline with Airflow, testing, and CI

github.com/Kevinsrm31/etl-ventas-airflow

Pipeline orchestrated with **Apache Airflow** that loads the daily sales file into **PostgreSQL**: it validates every row against 8 rules, stops the run if more than 20% of the file is rejected, and reloads the date in a single transaction, with no duplicate data. **67 pytest tests** run on **GitHub Actions** on every push and pull request. Published article.

Real-time processing with Docker, Kafka, and Spark Structured Streaming

github.com/Kevinsrm31/kafka-spark-streaming-docker

Streaming pipeline with **Apache Kafka** and **Spark Structured Streaming** that processes events in micro-batches, with output to the console and to a table queryable with SQL. Full environment (Zookeeper, Kafka, Spark cluster, and JupyterLab) started with Docker Compose, with a technical report and a published article.

Data Warehouse for a clinical laboratory inventory (MySQL)

github.com/Kevinsrm31/datawarehouse_almacen-laboratorio-clinico

Star schema design and OLTP → OLAP migration (dimension tables, fact table, time dimension with a recursive CTE) for a clinical laboratory inventory database, with referential integrity validation and a published technical article.

ETL in Python: OLTP to Data Warehouse migration (Docker)

github.com/Kevinsrm31/etl-python_migracion-oltp-dw

ETL pipeline in **Python** (pandas, SQLAlchemy) that extracts data from a MySQL database and flat files, transforms and validates it, and loads it into a dimensional Data Warehouse idempotently. Reproducible environment containerized with Docker.

Database modeling for a clinical laboratory inventory (MySQL)

github.com/Kevinsrm31/almacen-laboratorio-clinico-mysql

Three-level data modeling (conceptual, logical, and physical) for the OLTP inventory control system of a clinical laboratory, with documented entity-relationship diagrams.

WORK EXPERIENCE

Operations Supervisor

10/2025 – 07/2026

PILSAC – Sesuveca del Perú S.A.C.

- Daily consolidation in Excel of intake and production data for an anthracite coal plant (**300–400 t/day**, 10–15 intake trucks): material received, processed, graded, and rejected.
- Planned vs. actual production tracking, downtime logging and analysis (duration and cause), and equipment availability and performance calculation.
- Weekly and monthly management reports with tables and charts; cost and consumption control against budget and requisition entry in SAP / ERP.
- Led a team of **15 workers**; preventive and predictive maintenance, annual OHS plan progress tracking, and internal audits.

CERTIFICATIONS

AI Data Engineer Program
Datapath · 105 academic hours · Nov 2026
First place in the program
Courses · Datapath · 2026

SQL Para Todos · Google Cloud / BigQuery

Python para Todos · fundamentals, NumPy, and Pandas

Apache Spark Fundamentals

Fundamentals of Consuming and Building APIs with Python

Git Fundamentals in the Cloud

OTHER PROJECTS

PySpark: transformations and SQL on DataFrames
Distributed data processing with PySpark (Apache Spark / Databricks).
github.com/Kevinsrm31/pyspark-dataframes-transformaciones

PySpark ML: exploratory analysis and linear regression
EDA and linear regression with Spark ML to predict housing prices.
github.com/Kevinsrm31/pyspark-ml-fundamentals

Tools API: REST API with FastAPI
CRUD with FastAPI and Pydantic, Swagger, and automatic deployment on Render.
github.com/Kevinsrm31/tools-api

Python: FIFA World Cup data analysis
Data cleaning, transformation, and visualization with NumPy and Pandas.
github.com/Kevinsrm31/python-fundamentos-analisis-mundiales

MANAGEMENT TOOLS

Advanced Excel (pivot tables)

Power BI

ERP / SAP (user level)

MS Project · AutoCAD

PowerPoint

MANAGEMENT AND PROCESSES

Key performance indicators (KPIs)

ISO 9001 / 14001 / 45001 management systems

Internal audits

Maintenance management

HSE Supervisor — 06/2025 – 10/2025

MINCOAL S.A.C.

- Monthly calculation of frequency, severity, and accident-rate indices from man-hours, accidents, and lost days, at an iron ore beneficiation plant with **25 workers on 2 shifts**.
- OHS records and statistics (incidents, accidents, medical absenteeism, environmental plan compliance) in Excel dashboards, with monthly reports to the mine owner.
- Tracked inspection findings through closure and monitored training man-hours and training program compliance.

HSE Supervisor — 04/2025 – 05/2025

Consultores de Ingeniería Proyectos

- Tracked man-hours, high-risk work permits, and HSE indicators for an infrastructure assembly project (13 workers), with periodic reports to the client.
- Structured the technical closeout dossier with full evidence traceability, **approved without observations**; zero lost-time accidents.

Occupational Health and Safety Supervisor — 01/2024 – 03/2025

Compañía Minera y Maderera RA&OR S.R.L

- Monthly incident and accident statistics to identify trends and prioritize actions: IDIA events dropped from ~12 to 3–4 per month (**a reduction of over 60%**).
- Per-unit maintenance records for a **30-vehicle fleet** (17 pickups, 8 dump trucks, 5 vans): mileage-based scheduling, checklist inspections, and maintenance costs.
- Safety index calculation and monthly management reports for an operation with 53 drivers.

Maintenance and Infrastructure Coordinator — 01/2023 – 12/2023

Escacorp S.A.C.

- Maintenance budget control (PEN 100,000 per year for preventive and PEN 15,000 per quarter for corrective): actual vs. budget and cost breakdown, achieving an **average 30% saving** on the quarterly corrective maintenance budget.
- Logged maintenance work (date, asset, type, cost) across **7 sites** and tracked maintenance schedule compliance.
- Evaluated **18 suppliers** (lead times, costs, quality) and prepared progress valuations for payments.

HSE Supervisor — 04/2021 – 12/2022

Escacorp S.A.C.

- Calculated and reported OHS and environmental (ISO 14001) indicators for **80 workers across 7 sites**, with training records by area.
- Management system document control and follow-up of non-conformities in ISO 9001, ISO 14001, and ISO 45001 audits.

High-Risk Work Safety Supervisor — 01/2020 – 04/2021

Servitec GH – Ingeniería y Construcción

- Recorded high-risk work permits, inspections, and PPE issuance per worker; periodic site safety reports.

Administrative and Logistics Assistant — 07/2019 – 12/2019

Estación de Servicios San José S.A.C.

- Reconciled ERP sales with cash and collections, controlled accounts receivable and fuel inventory (tank readings vs. system), and built sales reports by product and customer with pivot tables.

Warehouse Assistant — 03/2017 – 03/2018

Representaciones e Inversiones J&M E.I.R.L.

- Product stock ledger (kardex) in Excel, physical vs. recorded inventory reconciliation, and turnover and minimum-stock analysis for replenishment.
